

HOW TO COLLECT A SOIL SAMPLE

Using a soil probe, spade, or shovel, collect the **top six inches** of soil from **fifteen random spots** in the desired area. **Mix** those samples together in a clean container and **bring three cups** of this mixed soil to your local Extension office.

Attempt to submit the soil sample within 24-48 hours of collection. Do not allow soil to sit in a sealed bag for a long period of time and please do not bring wet soil. Your soil sample(s) will be sent to the Soil Testing Laboratory at the Oklahoma State University in Stillwater. Fertilizer and soil amendment recommendations are provided based on the lab results and what you would like to grow.

If there is a troublesome area, collect only from that location following the same instructions above and place in a separate bag. Label the bag accordingly.

HOW TO COLLECT A WATER SAMPLE

Turn on the water for **one minute**, then **rinse** any 10+ oz. container several times with that running water, and **fill with 10 oz.** of water. Replace the cap and bring the sample to your local Extension office within 24-48 hours of collection.

ADDITIONAL INFORMATION

We do not provide testing kits. Please use a plastic bag for soil and a disposable water bottle for water. Allow air to circulate in the soil bag to evaporate any moisture. Please do not leave soil or water in a hot vehicle. Thank you.

Please call 405-713-1125 to check the availability of a soil probe.

Payment is due by **cash, check, or card** when the sample is brought to our office at 2500 NE 63rd Street, OKC 73111. The results will be emailed to you within three weeks.
