**PREMIUM SALE
MARKET LIVESTOCK PROJECTS
OTTAWA COUNTY FAIR**

Sale is sponsored by the Miami Regional Chamber of Commerce under the direction of the Agribusiness Task Force.

1. The sale will consist of 67 animals made up of 15 market beef, 30 market hogs, 10 market sheep and 12 market goats. The sale will consist of no more than 75% of total exhibits in any market division (beef, hogs, sheep and goats). The numbers listed will be sold if each species has maximum sale entries. If the minimum exhibits per species is not met, the premium sale committee has the discretion to alter the final premium sale entries number prior to the market shows. A minimum of eight market beef will sell.
2. Premium sale entries will be determined by each market animal division show judge. Placings for the sale order will occur following judging of each species.
3. The buyer is not buying the animal. They are only paying a premium on the animal. Ownership of the animal will not change.
4. An exhibitor may sell only one animal in the sale. If more than one animal qualifies, the exhibitor must take the highest sale order placing within the species. If exhibitor has more than one animal making the sale, and their entries tie (sale order), it is the exhibitors' choice as to which animal they will sell.
5. Mandatory premium sale meeting for all exhibitors who will sell in the premium sale, Friday August 12, 2022, at 4:30 p.m. in the show arena.
6. Sale will be Friday, August 12, 2022, at 7:00 p.m. in the show arena.
7. An exhibitor to be eligible for the Miami Regional Chamber of Commerce Ottawa County Premium Sale cannot have participated in any other premium sale at the county level in the same calendar year.
8. If an exhibitor is participating in a school function or event on the evening of the premium sale, the exhibitor may choose a substitute showman for the premium sale. The first choice for a substitute showman must be in the same species, second choice would be same chapter/club, last choice would be Ottawa County.
9. The First National Bank & Trust of Miami will clerk the sale and exhibitors will be paid their premium checks in a timely manner directly from the Miami Regional Chamber of Commerce.

Engineering Design Challenges

Criteria: Juniors - grades 3-7; Seniors – grades 9-12

Engineering design challenges are intended to encourage 4-H members to use the Engineering design process to create their own projects. These projects should include an engineering notebook, journal or description which answer the following questions about their project. Projects without an engineering notebook will be judged accordingly. Projects with notebooks will place before projects without notebooks, journals, or descriptions.

- What is the challenge or task of your project (Example: Throw a marshmallow six feet, incorporate technology into clothing, create alternative energy, design and build a rubber band powered car, etc.)
- Draw your design
- How did you test your design?
- What were the results?
- How did you change your design to improve it?
- Did you retest it? Did the results improve?
- Describe your final design and does it work?

Engineering Design Challenges will be judged based on creativity, design, function, and recordkeeping (journal or engineering notebook).

Marshmallow catapult challenge design task

Design a trebuchet-style swing arm catapult. It may be similar to a teeter-totter or swing set. The beam (arm) is able to swing (go up and down). The arm of the catapult must be adjustable from the center to an offset (One side of the beam is longer from center pivot point.). Use at least five (5) different types of materials or parts (craft sticks, brads, dowels, etc.). Use weights and gravity as the power source. Catapult cannot be any larger than a 3 foot cube (3' X 3' X 3')

Launch a marshmallow at least six (6) feet. A journal or engineering notebook should be included to describe the creation, purpose and function of the device. Explain how you built and tested your catapult. Chart your marshmallow launches.

Rubber Band-Powered Vehicle Design Challenge

Design a wheel-driven vehicle, powered only by one rubber band (size #64 approx. ¼" wide by ¾" long by 1/32" thick.), which will transport a one-pound "load" (box of baking soda approx. size: 3½" x 4½" x 2") at least 9 feet (on a smooth flat floor) while remaining within the boundaries of a 3 ft. wide parallel track (marked off with masking tape). Speed is not a criteria.

There are no restrictions on materials, size, weight or number of wheels. However, the only energy source permitted is the elastic energy of one rubber band. Commercially assembled vehicles are NOT permitted. However, commercially manufactured components may be used as parts of the vehicle. The vehicle must be self-starting (i.e., no pushing, external power starts, etc.). Propulsion of the vehicle must be through the wheels (i.e., no propellers, no launching mechanism). Transferring the energy of the rubber band to wheels via gears, fly wheels, etc., is encouraged. No remote-control devices are permitted.

A journal or engineering notebook should be included to describe the creation, purpose and function of the device. Explain how you built and tested your vehicle and if you made any modifications. Chart or graph collected data and explain how you measured improvements in your engineering notebook or journal.

The Future of Agriculture Research Challenge Displays

The future or agriculture research displays will illustrate current research and forward/futuristic thinking that is changing the field agriculture and agricultural based careers. 4-H members will research current trends, future thoughts and ideas for continuing to effectively feed the world. These projects should have a minimum of three scholarly references identifying where and when the information was published.

These projects may:

- Describe the challenging need for increased food production for a growing population
- Describe a new agricultural production technique or an emerging agricultural technology that will enhance or improve our agricultural and food production systems,
- Illustrate a new vision for the future of agriculture
- Describe new STEM-based careers in agriculture.

Research displays should use research-based information and resources to answer questions similar to the following, “What will the future of Agriculture look like?”, “How will agriculturalist feed an ever-growing population?” or “What are future careers in agriculture?”

All research displays should be mounted on a free-standing display board not to exceed 3’ x 3’ when the sides are extended for display. Commercially available “Science Fair Presentation boards” are encouraged”. First place exhibits in each class will be displayed. Second place and sub-sequential exhibits may be displayed based upon space available and judges’/committees’ discretion. Displays should be readable/understandable from a distance of 10 ft. A complete research report should be included with the display in a notebook.

SECTION 306 - Design and Construction

- The Skill Mastery sheet <https://4h.okstate.edu/projects/design-and-construction/curriculum-and-patterns.html> is an education tool to guide project work. Click hyperlink “[Sample Technique Cards](#)” to find instruction for many of the techniques noted in the skill sheets (i.e. facings, zippers, hems, fasteners, etc.). Additional hyperlinks to skill sheets and technique cards provided throughout categories. Fair exhibits have been carefully selected and directed for members to investigate and learn specific skills/information and to demonstrate mastery of these skills/information. The end product/exhibit is being evaluated on the skills “learned/mastered.” The skill sheet serves as the member’s “personal reflection” and communicates to the judge what was learned. Why is this important? Because in 4-H, the reflection and application of what was learned is more important than the end product/exhibit.

The skill sheet is to be used as a planning tool. It is important that each 4-H member take responsibility for the life skill of “learning to learn.” This may require members, leaders and educators to look up terms and learn techniques as part of the educational process. Resources, instructions and project guides are [posted](#) online. Members are encouraged to seek out other valid resources which teach proper technique and knowledge in the areas of design and construction.

- *General Skills to be mastered in project/product in ADC, IDC and HTDC:*
 - **Structural Design:** Construction technique, size, form, color and texture suited to the materials and product end use.
 - **Elements of Design:** The finished product illustrates the member is learning or “mastering” the basic elements of design - line, shape or form, texture, color, and space.
 - **Principles of Design:** The finished product illustrates an awareness and application of the principles of harmony, proportion, balance, rhythm and emphasis adding dimension, interest and/or appeal to the finished product.
 - **Surface Design:** This is any lines, shapes, colors, textures, or materials applied to the product or item’s design that creates an emotional or personal quality, individuality and creative expression without disturbing initial/end purpose/how it is used. Design is that “*something*” which makes the item unique to the individual designer.
- ✓ **Reports/Descriptions/Expense Sheet/etc.** – Exhibits requiring a report/description/expense sheet of any kind, can be typed or neatly/legible hand written. Report should be one-two pages. If typed, it must be double spaced using a minimum of 12-point font. **Report MUST be SECURELY attached to the exhibit.**
