

## Chickasha Regional Intensive Wheat Management Variety Trial

Wheat.okstate.edu

**Cooperator: OSU South Central Research Station**  
**Planting & Harvest Dates: 10/16/2023 & 06/14/2024**  
**Management: Conventional tillage**  
**Nitrogen: 6 lbs/acre 10-34-0, 40 lbs/ac on 2/19/24, 60 lbs/ac on 3/14/24**  
**Fungicide: 2.5 fl oz/ac Tebucure 3.6 at jointing on 03/14/24 and 9 fl oz/ac at flag leaf-boot stage on 04/3/24**

**Extension Educator: Kelly Burrows**  
**Previous Crop: Austrian Winter Peas**  
**Soil Type: Dale silt loam**  
**Soil Test: pH=6.6, N=56, P=35, K=221**

Notes: Grain yield was adjusted to 12% moisture content. Shaded values were not statistically different from the highest value within a column. Butler's Gold late-planted was planted on 12/04/2023. Lodging was evaluated at harvest on a 0 to 5 scale with 0 indicating no lodging and 5 plot completely lodged. \* Brackling was observed. Stripe and leaf rust fungal diseases were observed at moderate to severe pressure in the season. Disease severity ratings were collected on April 30 (around anthesis). The trial received 3.8" rainfall between harvest maturity and the time it could be harvested, thus driving down test weight. Em Dash "—" = data not available.
