Crop and Forage Recordkeeping App¹

Courtney Bir

Assistant Professor, Department of Agricultural Economics

Brent Ladd

Extension Assistant – Agricultural Finance

Rodney Jones

Professor, Agricultural Economics

Producers who have computers frequently ask about the availability of software programs to manage crop and forage production records. Before purchasing a software program, it is important to analyze the value of such a system with regard to making better management decisions. Producers should evaluate their existing records to determine the types of information sought from a software program. Are inventory records important? Are summary reports of primary interest? By considering specific record needs, the producer is better equipped to choose an appropriate software package. This publication is a compilation of software programs to be used as a reference for agricultural producers.²

If no records on crop or field performance are currently being kept, a good starting point may be some basic production records. Managers will want to maintain records on variety, planting rates, fertilizer rates, pesticides, fuel consumption, grain, hay or forage matter produced, etc. for each field to determine prolific or inefficient areas of the operation. Some records, such as Restricted Use Pesticides (RUPs) application, must be maintained according to the 1990 FACT Act.³

The most difficult steps to building a valuable record-keeping system are (1) making time for recordkeeping, (2) determining which information is economically feasible to collect and (3) summarizing the data for use in the decision-making process. Meaningful crop and forage records may be handwritten (for example, see extension.okstate.edu/programs/farm-management-and-finance/farm-and-ranch-account-book/index.html) or kept on a computer, tablet or

mobile application. The choice of programs, features and cost of software are the “fine-tuning” portion of recordkeeping. In the following summary of nine commercially available crop record keeping software packages, the features are described under three headings:

- Common Features
- Technological Information
- Advanced Features

The program purchase costs range from \$20 per month to \$300 per month for basic versions of the software; advanced versions are more expensive. Many software companies offer free program demonstration copies. Most programs provide comprehensive data entry fields, as well as production summaries.

Before purchasing any software, determine the level and cost of software support that will be provided by the company. In addition, some programs have specific enterprise information that is required before the program will work. Sorting and filtering capabilities and the type of reports generated may vary, but in many cases, producers have the opportunity to customize reports to meet specific needs. Another important feature may include the ability to query or search the data for specific field information. Every operator must determine the amount of time available to devote to practical recordkeeping and weigh this commitment against software costs, data entry features and the need for information for management purposes.

Information provided about the following programs was gathered from software websites. The summary does not cover all available programs or individual program features. Programs may have other capabilities that are not described in the summary. Producers should contact the respective companies for current purchase information, details on features and specific hardware requirements.

The features summarized in the following tables are not all-inclusive. As the user experiments with software packages, the capabilities of each program become clearer. Ultimately, the end user decides how much information to input, track, calculate and summarize to best suit their needs.

- ¹ Update from an earlier version co-authored by Randy True, former Extension Assistant and Damona Doye. Current updates by Brent Ladd, Extension Assistant.
- ² An internet search was used to identify widely used commercial software products with multiple applications. All information was gathered from published websites. Inclusion in this report is not an endorsement of a product nor is exclusion of a program a rebuke of the product.
- ³ For more information about the FACT Act, please refer to Extension Fact Sheet EPP-322, Pesticide Recordkeeping Requirements for Crop Production.

The Oklahoma Cooperative Extension Service

Education Everywhere for Everyone

The Cooperative Extension Service is the largest, most successful informal educational organization in the world. It is a nationwide system funded and guided by a partnership of federal, state and local governments that delivers information to help people help themselves through the land-grant university system.

Extension carries out programs in the broad categories of agriculture, natural resources and environment; family and consumer sciences; 4-H and other youth; and community resource development. Extension staff members live and work among the people they serve to help stimulate and educate Americans to plan ahead and cope with their problems.

Some characteristics of the Cooperative Extension system are:

- The federal, state and local governments cooperatively share in its financial support and program direction.
- It is administered by the land-grant university as designated by the state legislature through an Extension director.
- Extension programs are nonpolitical, objective and research-based information.
- It provides practical, problem-oriented education for people of all ages. It is designated to take the knowledge of the university to those persons who do not or cannot participate in the formal classroom instruction of the university.
- It utilizes research from university, government and other sources to help people make their own decisions.
- More than a million volunteers help multiply the impact of the Extension professional staff.
- It dispenses no funds to the public.
- It is not a regulatory agency, but it does inform people of regulations and of their options in meeting them.
- Local programs are developed and carried out in full recognition of national problems and goals.
- The Extension staff educates people through personal contacts, meetings, demonstrations and the mass media.
- Extension has the built-in flexibility to adjust its programs and subject matter to meet new needs. Activities shift from year to year as citizen groups and Extension workers close to the problems advise changes.

The information given herein is for educational purposes only. Reference to commercial products or trade names is made with the understanding no discrimination is intended and no endorsement by the Cooperative Extension Service is implied.

Oklahoma State University, as an equal opportunity employer, complies with all applicable federal and state laws regarding non-discrimination and affirmative action. Oklahoma State University is committed to a policy of equal opportunity for all individuals and does not discriminate based on race, religion, age, sex, color, national origin, marital status, sexual orientation, gender identity/ expression, disability, or veteran status with regard to employment, educational programs and activities, and/or admissions. For more information, visit <https://eeo.okstate.edu>.

Issued in furtherance of Cooperative Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture, Director of Oklahoma Cooperative Extension Service, Oklahoma State University, Stillwater, Oklahoma. This publication is printed and issued by Oklahoma State University as authorized by the Vice President for Agricultural Programs and has been prepared and distributed at a cost of 40 cents per copy. Revised April 2023 KG.
