

Altus Regional Wheat Variety Trial 2021-2022

wheat.okstate.edu

Cooperator: OSU Southwest Res. Ext. Center

Extension Educator: Gary Strickland

Planting & harvest dates: 10/19/2021 , not harvested.

Previous crop: Wheat

Management: Grain-only

Soil Type: Hollistes silt clay loam

Tillage: Conventional

Soil test: pH=6.8, N= 102, P= 148, K= 806

Note: Similar to many wheat fields in the region, this trial experienced severe drought stress throughout the growing season, with significant plant or tiller mortality and reduced kernel set, generating excessive variability across the field. This data would not be meaningful and misrepresent comparisons among varieties, and thus, this site was not harvested in 2022. For harvest results in previous year for this location, go to <http://wheat.okstate.edu/variety-testing/grain-yield>. We thank everyone involved for their time and patience.
