

# Kildare Wheat Variety Trial

wheat.okstate.edu

Cooperator: Stan Claybaker  
 Extension Educator: MacKinzie Overman  
 Planting & harvest dates: 11/14/2023 & 06/17/2024  
 Previous crop: soybeans  
 Management: Grain-only  
 Soil Type: Tabler silt loam  
 Tillage: No-till  
 Soil test: pH= 6.4, N = 98, P = 56, K= 302

**Notes:** Grain yield and protein concentration were adjusted to 12% moisture content. Shaded values were not statistically different from the highest value within a column. There was no variety trial in the 2021-2022 growing season, thus 3-year averages represent results from 2024, 2023, and 2021 harvest year. There was a severe pressure of stripe rust and moderate pressure of leaf rust. Disease severity ratings were collected on May 5 (around milky ripe stage). The trial received 1.5" rainfall between harvest maturity and the time it could be harvested, and disease pressure was high, possibly driving down test weight. Double-dashes "--" = data not available.
